

Are you looking to increase your revenues and consolidate your positioning in the MES and Industrial IT market?

Everywhere, we are surrounded with many hundreds of manufacturing companies where production managers face issues like global production follow up, machine performance tracking, production stoppage and delays. They have also challenges about the operating efficiency of their current set of production software.

At **Ordinal Software North America**, we are dedicated to helping these companies and production managers. We are the North American branch of our Ordinal Software editing company. We provide integrated and modular MES and Industrial IT software solutions called COOX.

We work in all North America through our network of selected Value-Added Resellers (VARs). We are currently looking to expand this network in 2022, in the Toronto and the northeast United States regions. **Could you be one of those?**

Key benefits of working with Ordinal Software:

- **Product offering:** Attract new customers and bring value to your current customers by offering COOX, a leading-edge mid-market software technology that could complete your product range and help you differentiate from competitors.
- **Increase Revenue:** Ordinal Software offers good margins for its resellers. In addition, you have the opportunity to gain revenue from additional services such as integration, training, support, etc.
- **Genuine partnership:** We support your success with a structured program that includes training, technical support, lead generation activities, sales cycle assistance and marketing. In short, we act as a true partner!
